

Industrial Heat Process Equipment Since 1939

You make it and we'll bake it

Bake it? Sure, but we can do so much more than that! We can also wash it, coat it, dry it, cure it or even relieve its stress.

Whatever you produce, we'll help you process. Anything from automotive parts to water skis; from oil, air and fuel filters to railroad box cars.

In fact, there's hardly a product on the market that isn't a candidate for our equipment: convection ovens; multi-stage washers; monorail, mesh belt and spindle conveyors; powder or liquid paint finishing systems; catalytic and thermal oxidizers and our gas-fired air-to-air heat exchangers.

We've been pioneering industrial heat processing innovations for nearly 70 years and we're coming up with new ideas every day. Ideas that can help solve your production problems and save you money in the process.

So, when you need assistance planning your next processing system—no matter how basic or complex—call Jensen Industries or visit our website today.

Jensen Industries Inc. proudly introduces our Batch Oven. We provide customers with the flexibility they expect from a Batch Oven with operating temperatures up to 850°F (See our Car Bottom Furnace for higher temperatures.) We take the time necessary to engineer air flow throughout each unit to give the end user very even heat displacement. We are one of the few manufactures that place an explosion relief/access door into our top mounted heater box for added protection in case of an explosion. From our Z-Cap construction, to our 4, 6 or 8 inch oven panel construction, every one of our Batch Ovens is manufactured to the rigid NFPA 86 Standard.

- Applications
- Composite Curing
- Stress Relieving
- Powder
- Paint Curing
